

ABDULLAH SYAFIQ SYECHBUBAKAR

Frontend Developer

South Jakarta, Indonesia • syafiq.syeach@gmail.com • +62 857 7415 3867 • [linkedin.com/in/abdullahsyafiq](https://www.linkedin.com/in/abdullahsyafiq) • github.com/SyafiqSyeach • abdullahsyafiq.netlify.app

BRIEF DESCRIPTION

Frontend Developer with experience across React, Angular, Vue, and TypeScript through work and personal projects. Background includes maintaining SaaS platforms, creating API integrations, collaborative development using Git/GitHub, and independently handling a technical migration. Self-driven, with a track record of independent projects built to explore new technologies and solve real problems.

PROFESSIONAL EXPERIENCE

PT. PERIKSA SOLUSI INDONESIA

Feb 2024 - Feb 2025

Frontend Developer Intern

Jakarta, Indonesia (Remote)

- Maintained a SaaS dashboard application by developing and updating interactive tables with advanced filtering, CRUD operations, and complex forms using Angular.
- Built and updated RESTful API service integrations and data models with TypeScript.
- Contributed to a separate application by building printable form templates using PHP and HTML, and utilized DBBeaver for data validation.

PLS PTE LTD

Feb 2026 - Now

Software Developer

Singapore (Remote)

- Created frontend API documentation from scratch by reviewing the existing frontend codebase and backend endpoint implementations for 12+ endpoints, documenting request/response schemas, data types, required fields, descriptions, and examples.
- Proposed and researched migrating the dashboard system from Google Charts to a more modern approach; introduced Apache ECharts by developing prototypes, building a conversion layer, and migrating selected charts from Google Charts while documenting the approach for future adoption.
- Worked independently within a legacy React/JavaScript stack and introduced TypeScript to the existing codebase, building a prototype dashboard page with typed API response interfaces and full API integration, demonstrating a potential approach for future development.

PROJECTS

MOD MANAGER • [Source Code](#) • [Website](#)

2025

Solo Developer

Personal Project

- Developed a web-based manager for Minecraft mods using React TypeScript.
- Built custom reusable hooks for fetching data and debouncing inputs, and integrated Modrinth's API using Axios, applying best practices learned from industry experience and independent study.
- Designed a scalable project architecture and folder system to enhance maintainability and future development.

PORTFOLIO WEBSITE • [Source Code](#) • [Website](#)

2025

Solo Developer

Personal Project

- Built a fully responsive portfolio site using Vue.js, featuring minimalist UI, dynamic routing, and toggleable dark mode.
- Deployed on Netlify with GitHub-integrated CI/CD pipeline for automated updates and version control.

- Achieved Lighthouse scores to 98–99 (Desktop) and 74–79 (Mobile) in Performance, 100 in Accessibility and Best Practices, and 92–100 in SEO.

WEB UI LAYOUT LIBRARY • [Source Code](#)

2024 - 2025

Team Leader / Frontend Developer

University Final Project

- Led a team of three to develop a modular web section layout library for faster web development using React, React libraries, TailwindCSS, TypeScript, Vite, deployed via Netlify, collaboration using Git/GitHub.
- Designed all of the interfaces, developed the layout editor system and contributed to database structuring.

EDUCATION

UNIVERSITAS BINA NUSANTARA
